

Christopher J. Smith - Senior Software Engineer

csmith4work@gmail.com

Professional Summary

Passionate software engineer with 9 years of experience spanning the full software development lifecycle. Specializing in full-stack development with a proven ability to adapt to any technology stack encountered. My experience ranges from customer-facing dashboards to auto-scaling microservice infrastructures, demonstrating versatility across diverse project types. I thrive at the forefront of technology, excelling in contexts that require innovative solutions. My approach emphasizes comprehensive requirement gathering, consistent communication, and robust documentation practices to ensure efficient and reliable software delivery. Driven to take on larger greenfield projects while mentoring the next generation of engineers.

Core Skills

Area	Technologies
Application and Web Development	C# & Dotnet, Node.JS & Typescript, React.JS, Vue & Nuxt.JS, Python, GraphQL, JQuery, SASS
Cloud Infrastructure	AWS, Terraform, IAM, Serverless Framework
Compute Infrastructure and Tooling	Docker, ECR, ECS, Lambda, EC2, Kubernetes, Helm, Heroku, Aptible, Firebase, ACR, ACI, ArgoCD
Software and 3P Integration	SNS, SQS, Stripe, Airtable, Canva, Gmail, Contentful, FFMPEG, Google API, Infor, Mailchimp, Quickbooks, Monday.com, Meta Business Suite
Data Storage	S3, SQL Server, MongoDB, Postgres, RDS, DynamoDb
Automation and Configurations	YAML, CodeBuild, CodePipeline, Github Actions, CircleCI, Spacelift, Secrets Manager, Parameter Store, Jenkins
Testing Frameworks	Jest, Puppeteer, Artillery, XUnit, SpecFlow, Gatling
Networking	Route53, Cloudflare, Cloudfront, VPC, NGINX
Scripting	Python, Bash, Git
Monitoring and Alerting	Splunk, Wavefront, New Relic, Opsgenie, CloudWatch, Sentry, Google Analytics
Project Tracking and Documentation	Jira, Confluence, Notion, LucidChart

Education

Bachelor of Science in Computer Science, Minor in Mathematics - May 2016, *Tennessee State University*

Professional Experience

Senior Software Engineer, Intuit Data Exchange(IDX) @ Intuit (Engineer II)

June 2024 – present

- Led or contributed to 5 successful third-party integration efforts, becoming the primary point of contact and subject matter expert across product teams.
- Created and maintained internal documentation in DevPortal, reducing integration implementation time by over 50%.
- Implemented new analytics and observability features in Appflow UI, including FullStory integration and funnel metrics for user behavior analysis.
- Advanced operational maturity by deepening system knowledge, improving developer workflows, and participating in cross-team architecture discussions.
- Built strong cross-functional partnerships and contributed code across teams to sustain delivery momentum and un-block product initiatives.
- Monitored system health through Splunk and Wavefront dashboards; created custom Splunk views to triage issues and track connection/integration performance.

Senior Application Engineer @ HCA

April 2023 – April 2024

- Researched, developed, documented and presented a proof-of-concept CI/CD pipeline for our applications that leveraged Docker, NGINX, Github Actions, Azure Container Registry and Azure Container Instances.
- Created a new framework for local development that simplifies and automates changing the application's behavior based on configuration and environment.
- Lead team through a successful application rewrite of a React dashboard. Designed new project architecture, delegated tasks among the team, and delivered the new and improved application on time.
- Managed project complexity and consistently switched between contexts as I was entrusted to contribute to 5 dashboards that covered 3 different initiatives.
- Integrated a new React homepage for employees with third-party services and APIs using the provided API Gateway created by Infor.
- Mentored and assisted junior developers with application development. Delegated tasks that suited their technical experience. Provided personal experience and code reviews to help develop growth and reinforce software best practices. Pair programming regularly with developers.

Cloud Platform Engineer II @ Butterfly Network

Dec 2021 – Jan 2023

- Coordinated and led the architecting of a system-wide monitoring and alerting system, seamlessly integrating AWS Route 53 Health Checks with NewRelic and Opsgenie.
- Consulted with a separate team and implemented the deployment pipeline for a brand new mobile Proof of Concept (POC) onto an established Kubernetes architecture leveraging Helm, Github Actions, and Terraform.
- Successfully orchestrated the migration of an e-commerce front-end from a legacy AWS architecture to a modern setup, taking the lead in configuring and maintaining the front-end using Cloudfront.
- Collaboratively steered over 20 application deployments to staging and production environments using CircleCI.
- Led a dynamic team in a Hackathon, innovating, testing, and presenting metrics for a robust load testing framework employing Artillery.
- Diligently participated in a 24x7 on-call rotation, providing support to the newly instituted Kubernetes architecture while also maintaining the legacy architecture established on Aptible.
- Authored and presented several Architecture Design documents to a Design Review committee, ensuring alignment and approval before project execution.

Software Engineer @ SmileDirectClub

March 2019 – Dec 2021

- Contributed to the breakdown of three sections of the company's monolithic e-commerce application into microservices, enhancing system maintainability and scalability, in an Agile development environment using Scrum and Kanban methodologies.
- Crafted and deployed microservices using .Net Core and DynamoDb through a CI/CD pipeline leveraging Jenkins, Docker, AWS, and Terraform.
- Authored and integrated front-end and back-end unit and integration tests into the CI/CD pipeline, ensuring robust and reliable software delivery.
- Seamlessly integrated a microservice with the RioSEO third-party API, automating a critical business process and resulting in annual savings of at least \$50,000 through reduced manual data entry.
- Enhanced and maintained the company's Component Library by adding and refactoring components using Vue.js and Bootstrap, promoting reusability and consistent UI/UX.
- Developed a MicroUI in Vue.js integrating with the Google Maps API, enabling it to be deployed as a CMS plugin via npm, improving content flexibility.
- Recognized for outstanding performance and contributions, leading to a promotion from Junior Software Engineer to Software Engineer.

Freelance Software Engineer @ Nashville, TN

August 2017 – January 2023

- Collaborated closely with a client to delineate business requirements, system design, and orchestrated the end-to-end implementation and deployment plan for a Software-as-a-Service platform developed in Typescript, Node.js, and React.js.
- Assumed responsibility for the application's infrastructure on Heroku, successfully executing a comprehensive infrastructure migration to AWS using the Serverless Framework.

- Directed offshore development team, steering the project to achieve a Minimum Viable Product that was successfully launched in the market.
- Conceived, crafted, and maintained a media production marketing website using Node.js, Vue.js, AWS, and Heroku. Seamlessly integrated the application with Contentful and Airtable, enhancing content management capabilities.
- Engineered an E-Commerce website using .Net Core and jQuery with a secure integration to Stripe for payment processing.
